

## Basel III Disclosures

### For the Quarter ended September 30, 2024

#### I. Scope of Application

The framework of disclosures applies to **RBL Bank Limited** (hereinafter referred to as the Bank), a scheduled commercial bank, incorporated on August 6, 1943.

The Bank's subsidiary, RBL Finserve Ltd. is a non-financial entity, and hence not consolidated for capital adequacy purpose. The bank does not have interest in any insurance entity.

As per capital adequacy guidelines under Basel III, insurance and non-financial subsidiaries / joint ventures / associates etc. of banks are not to be consolidated.

#### II. Capital Adequacy

##### Regulatory capital assessment

The Bank is subjected to Capital Adequacy guidelines stipulated by Reserve Bank of India (RBI). In line with RBI guidelines under Basel III, the Bank has adopted Standardized Approach for Credit Risk, Standardized Duration Approach for Market Risk and Basic Indicator Approach for Operational Risk while computing its Capital Adequacy Ratio (CAR).

As per capital adequacy guidelines under Basel III, the Bank is required to maintain a minimum CAR of 9% {11.50% including Capital Conservation Buffer (CCB)} as of September 30, 2024, with minimum Common Equity Tier I (CET I) CAR of 5.5% {8% including CCB}. The minimum CAR required to be maintained by the Bank for the year ended September 30, 2024 is 9% {11.5% including CCB}.

As on September 30, 2024, total CAR of the Bank stood at 15.39%, well above regulatory minimum requirement of 11.50% (including CCB). Tier I ratio of the Bank stood at 13.66% and CET I ratio at 13.66%.

##### Assessment of adequacy of Capital to support current and future activities

The Bank has a comprehensive Internal Capital Adequacy Assessment Process (ICAAP) which is approved by the Board of Directors (Board). Under ICAAP, the Bank determines adequacy of capital required for current and future business needs. ICAAP evaluates and documents all risks and substantiates appropriate capital allocation for risks identified under Pillar 2, if necessary.

ICAAP enables the Bank to assess the adequacy of capital to take care of future business growth, factoring in all the various risks that the Bank is exposed to, so that the minimum capital required is maintained on a continuous basis irrespective of changing economic conditions/ economic recession. The Bank takes into account both quantifiable and less quantifiable risks while assessing capital requirements. The Bank considers the following risks as material and has considered these while assessing and planning its capital requirements:

- Credit Risk
- Market Risk
- Operational Risk
- Liquidity Risk
- Credit Concentration Risk
  
- Interest Rate Risk in banking Book
- Business Risk

- Strategic Risk
- Compliance Risk
- Reputation Risk
- Information Security Risk
- Un-Hedged Foreign Currency Exposures
- Model Risk
- Legal Risk
- Pension Obligation Risk
- Environmental and Social Risk
- Outsourcing Risk
- Other Residual Risks

The Bank has also implemented a Board approved Stress Testing Framework. This involves the use of various techniques to assess the Bank's vulnerability to plausible but extreme stress events. The sub committee to Bank's Executive Risk Committee, which has representation from Business, Finance, Treasury, and Portfolio Risk team reviews the scenarios used for stress testing as well as reviews the results of stress testing. The results are thereafter reported to the RMCB. Results are reported to RMCB on a quarterly basis and to Board annually. The stress tests cover assessment of Credit Risk, Market Risk, Operational Risk ,Liquidity Risk, Interest Rate Risk in the Banking Book, Counterparty Credit Risk, stress on unhedged foreign Currency exposures, direct assignments and Intraday Liquidity risk under assumed 'stress' scenarios. Tolerance limits on the stress impact have also been defined for these stress tests . As per the Bank's assessment, it believes that its current capital adequacy position, adequate headroom available to raise capital, demonstrated track record for raising capital and adequate flexibility in the balance sheet structure and business model, the capital position of the Bank is expected to remain adequate.

#### Capital requirements for various risks

A summary of Bank's capital requirement for credit, market and operational risk along with CAR as on September 30, 2024 is presented below:

		(₹ In Millions)
SN	Particulars	30.09.2024
<b>(a)</b>	Capital requirements for Credit risk:	
	- Portfolios subject to standardized approach	101,748.63
<b>(b)</b>	Capital requirements for Market risk:	
	Standardized duration approach	
	- Interest rate risk	692.11
	- Foreign exchange risk (including gold)	688.50
	- Equity risk	26.73
<b>(c)</b>	Capital requirements for Operational risk:	
	- Basic indicator approach	16,584.76
<b>(d)</b>	Capital Adequacy Ratios	
	- Total Capital Adequacy Ratio (%)	15.39%
	- Tier-1 Capital Adequacy Ratio (%)	13.66%
	- Common Equity Tier-1 Capital Adequacy Ratio (%)	13.66%

### III. Credit Risk: General Disclosures

#### Policy and Strategy for Credit Risk Management

At the apex level, the Board of Directors is responsible for the Bank's Risk Management Framework. The Board has approved the Bank's Risk Appetite Framework for all the various risks that the Bank is exposed; viz. Credit Risk, Market Risk, Earnings Risk, Capital Risk, Operational Risk, Compliance Risk and others. The Board of Directors also maintains oversight on the management of various risks as outlined above.

The Risk Management Committee of Board (RMCB) assists the Board and helps to devise Policy and strategy for management of various risks including Credit Risk. RMCB approves/recommends to board the Bank's Credit Policies as per procedure, prudential exposure limits, credit assessment and approval system and procedure, margin and collateral management, credit documentation, credit pricing framework, credit administration and monitoring system, non-performing assets management policy, credit risk management system and exception management.

The Bank's Credit Risk Policies prescribe procedures for credit risk identification, measurement, grading, monitoring, reporting, risk control / mitigation techniques and management of problem loans/ credit. These Policies ensure that credit risk is identified, quantified and managed within the approved Risk Appetite Framework. The various Risk Management Policies include Credit Policy, Investment Policy, Market Risk Policy, Internal Control Policy, FXC& Derivatives Policy, Recovery Policy, Enterprise Risk Policy, Co-Lending Policy , Provisioning Policy, Country Risk Framework & Inter Bank limits policy, Valuation Policy, Operational Risk management and Policy on Transfer of Asset through Securitization & Direct Assignment of Cash Flows, Customer Suitability & Appropriateness Policy, and all these Policies are duly approved by the Board.

Credit Risk is defined as the probability of losses associated with reduction in credit quality of borrowers or counterparties leading to non-payment of dues to the Bank. In the Bank's portfolio, losses arise from default due to inability or unwillingness of a customer or counterparty to meet commitments in relation to lending, trading, settlements, or any other financial transaction.

#### Organizational Structure for Credit Risk Management function

At Executive level, Management Credit Committee (MCC) is responsible for operationalizing the credit policy and implementing credit framework as approved by the Board and RMCB. The committee recommends policies on standards for presentation of credit proposals, financial covenants, ratings, prudential limits on large credit exposures, standards for loan collaterals, etc. MCC also oversees portfolio risk management, loan review mechanism, risk concentrations, , provisioning and other regulatory/ legal compliances. The roles and responsibilities of the key functions involved in credit risk management are detailed below:

- Portfolio Risk Department– The Portfolio Risk department reports to the Chief Risk Officer (CRO) and is the custodian of all Risk Policies of the Bank. The team is responsible for implementation and operationalization of these Policies, as well as ensuring these are reviewed on a periodic basis, and disseminated to all relevant stakeholders. The unit is also responsible for portfolio analysis and reporting the same to Senior Management and Board, review of internal rating system, reviewing prudential limits and actual position submission of credit related returns/ MIS at periodic intervals.
- Portfolio Management & Early Warning Department – This department reports to the CRO and monitors the portfolio for identifying accounts that exhibit signs of incipient stress. Such accounts are reviewed along with the Relationship Manager (RM) and CRD.

- Sector Research Desk also reports to the CRO. This team conducts Sector and Industry Research with respect to the Bank's credit exposures. The team also carries out thematic reviews of the Bank's portfolio under specific events/ scenarios
- Credit Risk Department (CRD) – The CRD for Wholesale and Retail reports to Chief Credit Officer (CCrO) – Wholesale and Retail respectively. The CRD takes decisions on all credit applications in accordance with policies applicable to the specific proposal / product / scheme. To ensure complete independence, and to avoid any conflict of interest, the CRD is not assigned any business targets.
- Credit Administration Department (CAD)/ Retail Operations – The CAD at Corporate / Regional level acts as the third eye after business and CRD to ensure compliance with the Bank's policies and prudent lending requirements. Similarly, Retail Operations manages the post sanction processes for retail business.
- Stressed Assets Group (SAG) – The Stressed Assets Group monitors selected standard accounts under stress and corporate NPAs, follows up for recoveries very closely and provides guidance to the Relationship Manager (RM's) responsible for recovery and actively participates in the recovery effort where warranted. SAG also coordinates legal action for recovery, as warranted.
- Collections and recovery: The Collections and Recovery team follows up with clients where payments have been missed or delayed and also follows up for recovery efforts if accounts have turned NPA.

### **Credit risk measurement, mitigation, monitoring & reporting systems**

#### Credit Origination and Appraisal System

There are separate Credit Origination and Appraisal Processes for Wholesale and Retail segments. Within the Wholesale segment, Bank has adopted Target Operating Model for different client segments that is based, inter alia, on internal risk ratings, availability of security and other risk parameters. The credit sanctions are granted by experienced credit professionals and / or credit committees with delegated approval authorities as per Bank's Board approved Credit Policy, basis detailed appraisal memorandum that takes into account business and financial risks of the proposal. The Retail segment, on the other hand, relies largely on standardized product programs for credit risk assessment and approvals.

#### Credit Rating Framework

The Bank has put in place an internal rating system for Wholesale segment. The rating system uses various models, depending upon size of company as well as specialized models for Non-Banking Finance Companies (NBFC), Micro Finance Institutions (MFI) and Traders. The internal rating system is a step towards migration to Advanced Approach for Credit Risk as per Basel III.

The rating system is based on a two dimensional rating framework, Borrower Rating and Facility Rating. The Borrower Rating is determined first, which is based on assessment of Industry Risk, Business Risk, Management Risk and Financial Risk along with Project Risk / Conduct of Account (if applicable). The Facility Rating is based on Borrower Rating, and takes into account security structure, therefore is a combination of PD and LGD (Loss Given Default).

Besides, the Bank continues to endeavor to have all facilities above ₹ 7.5 crore, with borrower group's turnover being above ₹ 250 crore, to have external ratings.

#### Credit Documentation

The objective of credit documentation is to clearly establish the debt obligation of borrower to the Bank. In most cases, standardized set of documents are used as applicable, depending upon the type of credit facilities and the borrower entity. In cases of credit facilities for structured finance/ customized credit facilities for which standard documents have not been prescribed or are not appropriate, the documentation would be done on transactional basis in consultation with the Legal department/ external counsel.

#### Delegation of powers

The Bank has adopted 'Four Eyes' principle for credit approval. The principle dictates that generally at least two people must create, examine and approve a credit proposal. Most of the loan proposals require Joint Signature Approvals (JSA). This helps to avoid credit approval based on judgment of one functionary alone, ensures compliance and reduces risk from errors & prejudices. The Bank has also adopted Committee Approach for sanctioning high value credit proposals, viz. Board Investment & Credit Committee (BICC) and Management Credit Committee (MCC), as per authority matrix. The delegation Policy is approved by the Board and designed to avoid concentration of authority with few individuals.

#### Post Sanction Monitoring

The Bank has evolved a process to ensure end-use of funds is for the purpose for which credit limits are sanctioned. Further, it is ensured that the security obtained from borrowers by way of hypothecation, pledge, etc. are not tampered with in any manner and are adequate.

Periodic Credit Reports (PCR) are used to track the borrower's / investment performance on a quarterly / semi-annually basis. Performance, Status of compliance with Internal Risk Triggers, Covenants, Position of Un-hedged FCY exposure & Adherence to specific approval conditions (if any) is tracked on quarterly basis through PCR.

All exceptions related to sanctioned credit facilities are monitored by Exception Management Committee with MIS to Senior Management.

#### Early Warning System (EWS)

Bank has implemented automated EWS system based on AI/ML based rule engine to proactively identify emerging credit weakness well in advance. Bank's EWS system generates EWS/RFA triggers using various internal/ external data sources. The alerts generated by EWS system are reviewed by EWS team and post discussion in EWS forum (comprising of representatives from business, credit and EWS team), a final decision whether to include an account in any of the EWS category (viz. Observe/Monitor/EWS) or otherwise is taken for proactive monitoring.

#### Watch List & Adverse Labelled Accounts

Accounts which exhibit stress are tagged as "Watch list" accounts. Accounts which exhibit severe stress are tagged as "Adverse Labelled" accounts. Both these categories of accounts receive special management attention. Such accounts are monitored very closely by Stressed Assets Group, Senior Management and Board/ RMCB.

In view of the enactment of the Insolvency and Bankruptcy Code, 2016 (IBC), RBI has substituted the existing guidelines on Resolution of Stressed Sectors with a harmonized and simplified generic framework through various circulars. The Bank is fully compliant with these guidelines.

#### Review / Renewal of Loans

After a credit facility is sanctioned and disbursed, follow-up and reviews are conducted at periodic intervals. All funded and non-funded facilities granted to corporate customers are reviewed at least once a year or at more frequent intervals, as warranted.

#### Credit Pricing

Pricing of loans / advances / cash credit / overdraft or any other financial accommodation granted / provided / renewed or discounted usance bills is in accordance with the directives on interest rates on advances issued by RBI as well as internal policies of the Bank. The Bank has also adopted Risk Based Pricing for different categories of customers.

#### Credit Portfolio Analysis

Credit portfolio analysis is carried out at periodic intervals to review entire credit portfolio of the Bank to monitor growth, distribution, concentration, quality, compliance with RBI guidelines & policies of the Bank, accounts under Observe/ Monitor/ Early Warning System (EWS)/ Watch-List (WL)/ Adversely Labelled (AL) category etc. The same is monitored / reviewed by Senior Management/ Board / RMCB.

#### Loan Review Mechanism (LRM) and Credit Audit

The Bank has implemented LRM and Credit Audit framework. The primary objective includes monitoring effectiveness of loan administration, compliance with internal policies of Bank and regulatory framework, monitor portfolio quality, concentrations, post sanction follow-ups and appraising top management with information pertaining to the audit finding for further corrective actions.

#### **Non-performing Assets (NPA)**

An asset, including a leased asset, becomes non-performing when it ceases to generate income for the Bank. The Bank follows RBI prescribed norms for identification of NPA. Some of parameters of non-performing asset (NPA) is a loan or an advance where:

- i) Interest and/ or instalment of principal remain overdue for a period of more than 90 days in respect of a term loan. Any amount due to the bank under any credit facility is 'overdue' if it is not paid on the due date fixed by the bank.
- ii) The bill remains overdue for a period of more than 90 days in the case of bills purchased and discounted;
- iii) Instalment of principal or interest thereon remains overdue for two crop seasons for short duration crops, and one crop season for long duration crops;
- iv) The account remains 'out of order' in respect of an Overdraft/ Cash Credit (OD/CC). An account is treated as 'out of order' if:
  - a. the outstanding balance remains continuously in excess of the sanctioned limit / drawing power for more than 90 days; or
  - b. where outstanding balance in the CC/OD account is less than the sanctioned limit/drawing power but there are no credits continuously for 90 days, or the outstanding balance in the CC/OD account is less than the sanctioned limit/drawing

power but credits are not enough to cover the interest debited during the previous 90 days period ;

- v) The regular/ ad hoc credit limits have not been reviewed/ renewed within 180 days from the due date / date of ad-hoc sanction;
- vi) Drawings have been permitted in working capital account for a continuous period of 90 days based on drawing power computed on the basis of stock statements that are more than 3 months old, even though the unit may be working or the borrower's financial position is satisfactory;
- vii) Bank Guarantees/ Letters of Credits devolved on the Bank which are not reimbursed by the customer within 90 days from the date of payment;
- viii) A loan for an infrastructure / non-infrastructure project will be classified as NPA during any time before commencement of commercial operations as per record of recovery (90 days overdue), unless it is restructured and becomes eligible for classification as 'standard asset';
- ix) A loan for an infrastructure (/ non-infrastructure) project will be classified as NPA if it fails to commence commercial operations within 2 years (/1 year) from original date of Scheduled Commencement of Commercial Operations, even if it is regular as per record of recovery, unless it is restructured and becomes eligible for classification as 'standard asset' or unless the Scheduled Commencement of Commercial Operations is extended as per extant norms.
- x) The amount of liquidity facility remains outstanding for more than 90 days, in respect of a securitization transaction undertaken in terms of RBI guidelines on securitization;
- xi) In respect of derivative transactions, the overdue receivables representing positive mark-to-market value of a derivative contract, if these remain unpaid for a period of 90 days from the specified due date for payment.

#### **Non- performing Investments (NPI)**

NPI is one where:

- i) Interest / instalment (including maturity proceeds) is due and remains unpaid for more than 90 days;
- ii) The fixed dividend is not paid in case of preference shares;
- iii) In case of equity shares, in the event investment in shares of any company is valued at Re.1 per company on account of non-availability of latest balance sheet in accordance with RBI instructions;
- iv) If any credit facility availed by the issuer is NPA in the books of the bank, investment in any of the securities issued by the same issuer would be treated as NPI and vice versa;
- v) The investments in debentures / bonds which are deemed to be in the nature of advance would also be subjected to NPI norms as applicable to investments.

#### IV. Credit Risk: Disclosures for Portfolios Subject to the Standardized Approach

Ratings used under Standardized Approach:

As stipulated by RBI, the Bank applies ratings assigned to domestic counterparties by following Eligible Credit Assessment Institutions (ECAI's) namely:

- CRISIL Limited;
- CARE Limited;
- India Ratings & Research Private Limited (earlier known as Fitch India);
- ICRA Limited;
- ACUTIE (SMERA);
- Infomerics Valuation and Rating Pvt Ltd.
- Brickwork Ratings (BWR) \*\*(as per segments allowed by regulators)

The Bank applies the ratings assigned by the following international credit rating agencies, approved by the RBI, for risk weighting claims on overseas entities:

- Fitch Ratings
- Moody's
- Standard & Poor's
- Brickwork Ratings India Private Limited (as per segments allowed by regulators)

The Bank reckons external ratings for risk weighting purposes, if the external rating assessment complies with the guidelines stipulated by RBI.

Types of exposures for which each agency is used:

The Bank has used the solicited ratings assigned by the above approved credit rating agencies for all eligible exposures, both on balance sheet and off balance sheet, whether short term or long term, as prescribed in the RBI guidelines.

Process used for application of issue ratings to comparable assets in banking book:

Key aspects of the Bank's external ratings application framework are as follows:

1. The Bank uses only those ratings that have been solicited by the counterparty;
2. Where the facility provided by the Bank possesses rating assigned by approved ECAI, the risk weight of the claim is based on this rating;
3. The Bank also reckons external rating at the borrower (issuer) level as follows:
  - a. In case the Bank does not have exposure in a rated issue, the Bank would use the long term issue rating (inferred rating) for its comparable unrated exposures to the same borrower, provided that the Bank's exposures is pari-passu or senior and of similar or shorter maturity as compared to the rated issue, then this rating is applied on all unrated facilities of the borrower;

- b. Where a short term rating is used as an inferred rating for a short term un-rated claim, the risk weight applied shall be one notch higher than corresponding to the risk weight of the inferred rating.

\*\* Kindly refer circular RBI/2024-25/50 DOR.STR.REC.26/21.06.008/2024-25 dated July 10,2024

### Issue Specific Ratings

- a. All long term and short term ratings assigned by the credit rating agencies specifically to the Bank's long term and short term exposures respectively are considered by the Bank as issue specific ratings.
- b. For assets in the Bank's portfolio that have contractual maturity less than or equal to one year, short term ratings accorded by the chosen credit rating agencies are considered relevant. For other assets, which have a contractual maturity of more than one year, long term ratings accorded by the chosen credit rating agencies are considered relevant.
- c. Long term ratings issued by the chosen domestic credit rating agencies have been mapped to the appropriate risk weights applicable as per the standardised approach. The rating to risk weight mapping furnished below was adopted for domestic corporate exposures, as per RBI guidelines:

Long Term Rating	AAA	AA	A	BBB	BB & Below	Unrated*
Risk weight	20%	30%	50%	100%	150%	100%

- d. In respect of issue specific short term ratings the following risk weight mapping has been adopted by the Bank, as provided in the RBI guidelines:

Short Term Rating equivalent	A1+	A1	A2	A3	A4 & D	Unrated*
Risk weight	20%	30%	50%	100%	150%	100%

\* Claims on corporates and NBFCs, except CICs having aggregate exposure from banking system of more than INR 100 crore which were rated earlier and subsequently have become unrated are applied a risk weight of 150%. Additionally, all unrated claims on corporates and NBFCs, except CICs having aggregate exposure from banking system of more than INR 200 crore are applied a risk weight of 150%.

\* Further, inline with the RBI circular dated 16th November 23 “Regulatory measures towards consumer credit and bank credit to NBFCs”, for all NBFCs excluding CICs, HFCs and NBFCs which are eligible for classification under priority sector lending, the Bank applies an additional 25% risk weight over and above the extant risk weight corresponding to an external rating where the extant risk weight is below 100%.

### Quantitative Disclosures

For exposure amounts after risk mitigation subject to the standardized approach, amount of Bank's exposure (rated and unrated) in the following three major risk buckets as well as those that are deducted:

(₹ In Millions)

Particulars	30.09.2024
- Below 100% risk weight	1,114,300.03
- 100% risk weight	220,747.53
- More than 100% risk weight	324,387.21
- Deducted	2,359.82

### Treatment of undrawn exposures

As required by regulatory norms, the Bank holds capital even for the undrawn portion of credit facilities which are not unconditionally cancellable without prior notice by the Bank, by converting such exposures into a credit exposure equivalent based on the applicable Credit Conversion Factor (“CCF”). For credit facilities which are unconditionally cancellable without prior notice, the Bank applies a CCF of zero percent on the undrawn exposure, except as required under RBI guidelines for un-drawn CC limits (even if the facilities are unconditionally cancellable without prior notice) for borrowers having aggregate fund based working capital limit of Rs.1,500 mn and above from the Banking system.

## **V. Credit Risk Mitigation: Disclosures for Standardized Approaches**

### **Policies and processes**

The Bank has in place Credit Policy duly approved by the Board. The policies lay down the types of securities normally accepted by the Bank for lending, and administration / monitoring of such securities in order to safeguard / protect the interest of the Bank so as to minimize the risk associated with it.

### **Credit Risk Mitigation**

In line with RBI guidelines, the Bank uses comprehensive approach for credit risk mitigation. Under this approach, the Bank reduces its credit exposure to the counterparty when calculating its capital requirements to the extent of risk mitigation provided by the eligible financial collateral as specified.

### **Main types of collateral taken by Bank**

Bank uses various collaterals financial as well as non-financial, guarantees and credit insurance as credit risk mitigants. The main collaterals include bank deposits, National Saving Certificate (NSC) / Kisan Vikas Patra (KVP) / Life Insurance Policies, plant and machinery, Stocks & book debts, residential and commercial mortgages, vehicles and other movable properties. All collaterals are not recognized as credit risk mitigants under the standardized approach. The following are the eligible financial collaterals which are considered under standardized approach.

- Fixed Deposit receipts issued by the Bank;
- Securities issued by Central and State Governments;
- KVP and NSC provided no lock-in period is operational and that can be encashed within the holding period;
- Life Insurance Policies with declared surrender value, issued by an insurance company regulated by the insurance sector regulator;
- Gold, include bullion and jewellery after notionally converting to 99.99% purity.

### **Main type of guarantor counterparties**

Wherever required the Bank obtains personal or corporate guarantee as an additional comfort for mitigation of credit risk which can be translated into a direct claim on the guarantor which is unconditional and irrevocable. The creditworthiness of the guarantor is normally not linked to or affected by the borrower's financial position.

### **Concentration Risk in Credit Risk Mitigants**

The credit risk mitigation taken is largely in the form of cash deposit with the Bank and thus the concentration risk (credit and market) of the mitigants is low. Besides, the Bank has also set internal limits for certain sensitive sectors to mitigate concentration risk.

## Quantitative Disclosures

(₹ In Millions)

SN	Particulars	30.09.2024
1.	Total Exposure (on and off balance sheet) covered by eligible financial collateral after application of haircuts	59,895.71
2.	Total Exposure (on and off balance sheet) covered by guarantees / credit derivatives	18,872.09

### VI. Securitisation and Transfer of loan Exposures: Disclosure for Standardised Approach

The Bank may undertake securitisation / loan assignment transactions with the objective of maximising return on capital employed, managing liquidity and maximising yield on asset opportunities.

The RBI issued Master Direction - Reserve Bank of India (Securitisation of Standard Assets) Directions, 2021' and 'Master Direction – Reserve Bank of India (Transfer of loan exposures) Directions, 2021 on September 24, 2021 (hereinafter, the 'revised securitisation guidelines'), updated on December 5, 2022. The said guidelines define minimum holding period, minimum retention requirements, due diligence, credit monitoring, stress testing requirements, etc. For loan assignment transactions, credit enhancement has been disallowed for transactions undertaken on or after May 7, 2012.

The Bank undertakes the 'purchase' and 'sale', transactions through both securitisation and loan assignment routes and has Board approved policies for the same.

The Bank participates in Securitisation and Loan Assignment transactions in the following roles:

- **Originator / Seller** - The Bank originates assets in its book and subsequently down-sells them through the securitisation or assignment route.
- **Servicing and Collection agent** - For assets securitized, the Bank undertakes the activity of collections and other servicing activities .
- **Investor** - The Bank invests in Pass Through Certificates ('PTCs') backed by financial assets originated by third parties for the purposes of holding/trading/maximizing yield opportunities and meeting priority sector lending requirements.
- **Assignee** - The Bank purchases loans through the direct assignment route for purposes of book building and yield optimisation.
- **Liquidity facility provider** - In case of sale transactions undertaken through the securitisation route, the Bank may also provide liquidity facility. This is a type of credit support used to meet temporary collection mismatches on account of timing differences between the receipt of cash flows from the underlying performing assets and the fulfilment of obligations to the beneficiaries.
- **Credit enhancement provider** - Under the revised securitisation guidelines, the Bank may provide credit enhancement on Securitisation 'sale' transactions undertaken by the Bank / a third party for meeting shortfalls arising on account of delinquencies and prepayment losses in the underlying pool sold.

- **Underwriter** - The Bank may underwrite in whole or part of an issuance of securitised debt instruments, with the intent of selling them at a later stage subject to stipulations under the extant RBI guidelines.

**The major risks inherent in Securitisation/Loan Assignment transactions are given below:**

- **Credit Risk**

In case of Securitisation transactions, where credit enhancement is provided by the originator or any third party as permitted under the revised guidelines, the investor bears the loss in case the shortfalls in collections exceed the credit enhancement provided. If credit enhancement is provided in the form of a corporate guarantee, the investor bears the loss that could arise due to default by the guarantor which is also reflected in the rating downgrade of the corporate guarantor. In case of Loan Assignment transactions, the assignee bears the loss arising from defaults/delinquencies by the underlying obligors.

- **Market Risk:**

- a) Liquidity Risk**

This is the risk arising on account of absence of a secondary market, which provides exit options to the investor/participant.

- b) Interest Rate Risk**

This is the mark-to-market risk arising on account of interest rate fluctuations.

- **Servicer Risk**

Servicer risk is the risk arising on account of the inability of a collection and processing agent to collect monies from the underlying obligors and operational difficulties in processing the payments. In long tenor pools, the investor is exposed to the risk of servicer defaulting or discontinuing its operations in totality.

- **Regulatory and Legal Risk:**

These are risks arising on account of non-compliance of transaction structures with the extant regulatory guidelines which may result in higher risk weight and hence, higher capital charge being applied on the transaction or the Bank not being able to classify the transactions as priority sector lending. These risks also arise when transactions are not compliant with the applicable laws which may result in the transaction being rendered invalid. Conflict between the provisions of the transaction documents and those of the underlying financial facility agreement or non-enforceability of security/claims due to imperfection in execution of the underlying facility agreements with the borrowers could also lead to an increase in legal risk. Risk could also arise due to issues on interpretation of tax laws leading to changes in scheduled transaction cash flows.

The overall framework for both the securitisation and loan assignments are specified in Bank's approved policies. The policy specifies the key requirements that need to be adhered for all such transaction such as assets eligible for securitisation, Minimum Holding Period (MHP), Minimum Retention Requirement (MRR), credit enhancement, structure and accounting treatment

- **Prepayment Risk**

Prepayments in the securitised /assigned pool result in early amortisation and loss of future interest (reinvestment risk) to the investor on the outstanding amounts

- **Co-mingling Risk**

This is the risk arising from co-mingling of funds belonging to the investor(s) with other funds of the originator and/or servicer. This risk occurs when there is a time lag between collection of amounts due from the obligors and payouts made to the investors/assignee.

**Significant accounting policy for securitisation and transfer of assets**

Assets transferred through securitisation and direct assignment of cash flows are de-recognised when they are sold (true sale criteria being fully met with) and consideration is received. Sales / transfers that do not meet true sale criteria are accounted for as borrowings. For a securitisation or direct assignment transaction, the Bank recognises profit upon receipt of the funds and loss is recognised at the time of sale.

On sale of stressed assets, if the sale is at a price below the net book value (i.e., funded outstanding less specific provisions held), the shortfall is charged to the Profit and Loss Account and if the sale is for a value higher than the net book value, the excess provision is credited to the Profit and Loss Account in the year when the sum of cash received by way of initial consideration and / or redemption or transfer of security receipts issued by SC/RC exceeds the net book value of the loan at the time of transfer.

In respect of stressed assets sold under an asset securitisation, where the investment by the bank in security receipts (SRs) backed by the assets sold by it is more than 10 percent of such SRs, provisions held are higher of the provisions required in terms of net asset value declared by the Securitisation Company ('SC') / Reconstruction Company ('RC') and provisions as per the extant norms applicable to the underlying loans, notionally treating the book value of these SRs as the corresponding stressed loans assuming the loans remained in the books of the Bank.

Bank recognizes Excess Interest Spread (EIS) only on cash basis.

Direct Assignment portfolio bought by the Bank, if any, are classified as advances. These are carried at acquisition cost unless it is more than the face value, in which case the premium is amortised over the tenor of the loans.

**External credit rating agencies**

In the banking book, following were the external credit rating agencies involved with the Bank's Securitisation transactions:

- CARE Ratings
- CRISIL Ratings

The ratings declared / issued by the above ratings were used to cover the following securitisation exposure:

- The pass-through certificates (PTCs) purchased by RBL Bank
- PTCs where RBL Bank is the Originator and a provider of credit enhancement.

**VII. Market Risk in Trading Book**
**Policy and Strategy for Market Risk Management**

Bank defines Market Risk as the risk of losses in trading book due to movements in market variables such as interest rates, credit spreads, foreign exchange rates, forward premia, commodity prices, equity prices etc. Bank's market risk exposure arises from investment in trading book (AFS & HFT category), foreign exchange positions, and derivative positions. Under market risk management, interest rate risk, equity price risk and foreign exchange risk are monitored and managed.

Market Risk is managed in accordance with the Board approved Investment Policy, Market Risk Policy, FX & Derivatives Policy and Customer Suitability & Appropriateness Policy. The policies lay down well-defined organization structure for market risk management functions and processes whereby the market risks carried by the Bank are identified, measured, monitored and controlled within the stipulated risk appetite of the Bank.

**Organization Structure for Market Risk Management function**

The organizational structure of Market Risk Management function has the Board of Directors at the apex level that maintains overall oversight on management of risks. The Risk Management Committee of Board (RMCB) devises policy and strategy for integrated risk management which includes Market Risk. At executive level, Asset Liability Management Committee (ALCO) monitors management of Market Risk. The main functions of ALCO also include balance sheet planning from a risk return perspective including the strategic management of interest rate risk and liquidity risk.

The Market Risk Management process includes the following key participants:

- The Market Risk Department, which is an independent function, reports to Chief Risk Officer (CRO), and is responsible for developing the policy framework for Market Risk management and day to day oversight over the Market Risk exposures of the Bank.
- The Treasury Mid Office is responsible for monitoring all Treasury exposures in line with the policies of the bank and escalating excesses/ violations etc. in a timely manner so that corrective action can be initiated.

- Treasury Investment Committee oversees and reviews investments in Government Securities, bonds and debentures, equity investments, and investments in other approved securities and instruments.

## **Risk Reporting, Measurement, Mitigation and Monitoring Systems**

The Market Risk Management framework ensures that there are sufficient processes and controls in place to ensure all market risk exposures are monitored and are within the risk appetite set by the Bank's Board.

### **Reporting and measurement systems**

The Bank has prescribed various risk metrics/ limits for different products and investments. These limits help to measure and manage Market Risk, thereby ensuring that all exposures are within the Board approved risk appetite of the Bank. The nature of limits includes position limits, gap limits, tenor & duration limits, stop-loss, Value at Risk (VaR) limits. All limits are monitored on a daily basis by the Mid-Office. Limit breaches/ excesses are escalated as per the Market Risk policy.

### **Liquidity Risk Management**

Liquidity Risk is managed in the following manner:

- Asset Liability Management (ALM) Policy of the Bank specifically deals with liquidity and interest rate risk management.
- As envisaged in the ALM policy, liquidity risk is managed through Traditional Gap Analysis based on the residual maturity / behavioral pattern of assets and liabilities as prescribed by RBI.
- Monitoring of prudential (tolerance) limits set for different residual maturity time buckets, large deposits, loans, various liquidity ratios for efficient asset liability management;
- The Bank has also put in place mechanism of contingency plan for liquidity risk management;
- Contingency Funding Plan (CFP), approved by the Board sets process to take care of crisis situation in the event of liquidity crunch or a run on the Bank. A comprehensive set of Early Warning Indicators has been designed to forewarn of impending liquidity stress. Crisis Management Team (CMT) would be convened to provide direction of follow up action on handling the crisis situation.

### **Assessment of Illiquidity**

The Bank has established procedures for calculating an adjustment to the current valuation of less liquid (i.e. illiquid) positions for regulatory capital purposes. The framework for assessing the illiquidity is documented in the board approved Market Risk Policy of the bank. The adjustment to the current valuation of illiquid positions is deducted from Common Equity Tier I (CET I) capital while computing CAR of the Bank.

### Portfolios covered by Standardized Approach

The Bank has adopted Standardized Duration Approach (SDA) as prescribed by RBI for computation of capital charge for market risk for:

- Securities included under the Fair value Through P&L - Held for Trading (FVTPL- HFT) category,
- Net Open foreign exchange position limits, and
- Trading positions in derivatives.

### Capital requirement for:

Equity Position Risk	26.73
Foreign Exchange Risk	688.50

## VIII. Operational Risk

### Policy and Strategy for Operational Risk Management

Operational Risk is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. Operational Risk includes legal risk but excludes strategic and reputational risk. The Bank is exposed to Operational Risk due to its extensive use of technology, exposure to potential errors, frauds, or unforeseen events resulting in unexpected losses in the course of business activities.

The Bank has put in place a Board approved governance and organisational structure with clearly defined roles and responsibilities to mitigate operational risk arising out of the Bank's business and operations. The Bank has a well-documented Operational Risk Management Policy. The independent Operational Risk Management function reporting directly to the CRO sets out the operational risk management framework and policies, supported by procedures that help manage operational risk within approved tolerances.

### Operational Risk Management Governance Structure

The Bank has a defined Operational Risk Management governance structure. The Board of Directors of the Bank defines the risk appetite, sets the risk management strategies and approves the operational risk policies of the Bank. The Bank's risk management processes are guided by well-defined policies commensurate with size of the organization and supported by independent risk oversight and periodic monitoring by the Risk Management Committee of the Board (RMCB).

To oversee the effective management of Operational Risk, the Bank has constituted the Operational Risk Management Committee (ORMC) consisting of senior management personnel. The ORMC, which supports the Executive Risk Committee (ERC) is responsible for overseeing the implementation of the Operational Risk Management Policy at the Bank. The primary function of the ORMC is to monitor the management of key operational risks and to provide guidance and direction for mitigating the same.

The Operational Risk Management (ORM) unit is tasked with coordinating and implementing the Operational Risk activities of the Bank and driving processes for the sound management of operational risk. The ORM team analyses identified risks, facilitates root cause analysis of reported operational risk events to identify open risks, and suggest suitable risk mitigating actions which are

monitored for resolution. It is also responsible for ensuring the communication of operational risk events and loss experience to senior management and the ORMC.

Additionally, with a view to ensure sound practices in respect of governance of the overall Operational Risk, the Bank has outlined policies and processes in respect of Information Security, Outsourcing, Business Continuity Planning & IT Disaster Recovery, Records Management, Fraud Control and Customer Service.

### **Risk Reporting, Measurement, Mitigation and Monitoring Systems**

While day-to-day operational risk management rests with the first line of defence, i.e. Business, Operations and Support functions, the ORM Unit as second line of defence is responsible for implementing the operational risk management framework across the Bank. It designs and develops tools required for implementing the framework, including policies, procedures and guidelines.

Internal Audit is the third line of defense and provides independent assurance of the adequacy of, and compliance with the Bank's established policies and procedures, in the risk management functions as well as across the various Business and Support units of the Bank.

The following are some of the key techniques applied by the Bank to manage Operational Risk:

- The Bank has built into its operational process segregation of duties, clear reporting structures, standard operating procedures, staff training and strong audit trails to control and mitigate operational risks.
- New product notes prepared by Business units are reviewed by all concerned departments including Compliance, Risk Management and Legal and approved through the Product Approval Committee.
- Standard Operating Processes (SOPs) are documented for operational processes to ensure controls and procedures are adequate to mitigate inherent operational risk due to errors or lapses.
- Operational Loss and Near Miss events are required to be reported on the ORM system for root cause analysis and mitigating actions.
- Risk and Control assessments are performed for all key operational units, to systematically assess inherent operational risks and quality of controls to mitigate the risks.
- Key Risk Indicators (KRI) are defined for all key operating units and are monitored regularly to enable timely action to mitigate any anticipated risks.
- Awareness programs to make the line functions aware of operational risk and its management have been established.
- Dedicated Internal Vigilance and Fraud Risk Management teams are responsible for prevention and investigation of internal and external frauds. The team continually monitors existing threats and takes pro-active measures to thwart frauds against the Bank and its customers.
- Disaster Recovery (DR) and Business Continuity Plans (BCP) have been established for all businesses to ensure continuity of operations and minimal disruption to customer services. These plans are tested and reviewed to ensure their effectiveness to mitigate unforeseen risks arising out of disruptions.
- The Information Security Steering Committees provides direction for mitigating the operational risk in Information Security.

- Risk Transfer via Insurance - Insurance policies are used to confront insurable losses which may occur as a result of events such as natural disasters, due to losses from errors & omissions and fidelity done either by an employee or an appointed vendor staff.

#### **Approach for Operational Risk capital assessment**

In accordance with RBI guidelines, the Bank currently follows the Basic Indicator Approach (BIA) for computation of capital charge for Operational Risk. The RBI in Jun 2023 has issued the Master Direction on Minimum Capital Requirements for Operational Risk. As per the Master Direction, all existing approaches for measuring minimum operational risk capital requirements shall be replaced by the New Standardised Approach (NSA). The effective date for implementation of NSA would be notified by the RBI.

### **IX. Interest Rate Risk in the Banking Book (IRRBB)**

#### **Policy and Strategy for Interest Rate Risk Management**

Interest rate risk in banking book represents the Bank's exposure to adverse movements in interest rates with regard to its non-trading exposures. Interest rate risk is measured by doing a gap analysis as well as factor sensitivity analysis. Bank holds assets, liabilities with different maturity and linked to different benchmark rates, thus creating exposure to unexpected changes in the level of interest rates in such markets.

Interest Rate Risk is managed in accordance to the Board approved Asset Liability Management (ALM) Policy, Investment Policy. The policies lay down well-defined organization structure for interest rate risk management functions and processes whereby the interest rate risks carried by the Bank are identified, measured, monitored and controlled.

#### **Organization Structure for Interest Rate Risk Management function**

The organizational structure of the Bank for Interest Rate Risk Management function has the Board of Directors at the apex level that maintains overall oversight of management of risks. The Risk Management Committee of Board (RMCB) devises policy and strategy for integrated risk management which includes interest rate risk. At operational level, Asset Liability Management Committee (ALCO) monitors management of interest rate risk. The main functions of ALCO include balance sheet planning from a risk return perspective including the strategic management of interest rates and liquidity risks.

#### **Risk Reporting, Measurement, Mitigation & Monitoring systems**

- Interest rate risk is managed using Earnings Perspective and Economic Value Perspective method.
- Earnings perspective - Based on the gap report, Earnings at Risk (EaR) approximates the impact of an interest rate/ re-pricing shock for a given change in interest rate on the net interest income (difference between total interest income and total interest expense) over a one year horizon.
- Economic value perspective - As against the earnings approach, interest rate risk is monitored based on the present value of the Bank's expected cash flows. A modified duration approach is used to ascertain the impact on interest sensitive assets, liabilities and off-balance sheet positions for a given change in interest rates on Market Value of Equity (MVE).
- Monitoring – The Bank employs EaR and MVE measures to assess the sensitivity to interest rate movements on entire balance sheet. EaR and MVE thresholds have been prescribed and the results are monitored on an ongoing basis.

The findings of the risk measures for IRRBB are reviewed by Board at quarterly intervals.

### Nature of IRRBB and Key assumptions

- Interest rate risk is measured by using Earnings Perspective and Economic Value Perspective method.
- The distribution into rate sensitive assets and liabilities under Interest Rate Sensitivity Statement, Coupons, Yields are as prescribed in ALM policy of the Bank.
- Non-maturity deposits (current and savings) ) and Term Deposit (premature withdrawal behavioural) are classified into appropriate buckets according to the study of behavioural pattern as laid out in Bank's ALM Policy .

### Quantitative Disclosures

Increase (decline) in earnings and economic value (or relevant measure used by management) for upward and downward rate shocks according to management's method for measuring IRRBB.

Earnings Perspective

(₹ In Millions)	
Interest rate shock	30.09.2024
1% change in interest rate for 1 year	1,470.44

Economic Value Perspective

(₹ In Millions)	
Interest rate shock	30.09.2024
200 basis point shock	14,939.05

### X. DF – 10 General Disclosure for Exposures Related to Counterparty Credit Risk

**Qualitative Disclosures:** Counterparty Credit Risk (CCR) is the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows. An economic loss would occur if the transactions or portfolio of transactions with the counterparty has a positive economic value for the Bank at the time of default. Unlike exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending bank faces the risk of loss, CCR creates a bilateral risk of loss whereby the market value for many different types of transactions can be positive or negative to either counterparty. The market value is uncertain and can vary over time with the movement of underlying market factors.

The Bank's Derivative transactions are governed by the Bank's FX & Derivatives Policy, Credit Policy, Market Risk Policy, Country Risk Framework & Inter-Bank Limit Policy and Customer Suitability & Appropriateness Policy as well as by the extant RBI guidelines.

The Bank measures counterparty risk using current exposure method. Counterparty limits are approved as per the Bank's Credit Policies. The sanction terms may include the requirement to post upfront collateral, or post collateral should the mark to market (MTM) exceed a specified threshold; on a case to case basis. The Bank retains the right to terminate transactions as a risk mitigation measure, in case the client does not adhere to the agreed terms.

All counterparty exposures are monitored against these limits on a daily basis and breaches, if any, are reported promptly.

**Bilateral Netting:** The RBI has issued guidelines on "Bilateral Netting of Qualified Financial Contracts - Amendments to Prudential Guidelines" on March 30th, 2021 vide which banks can compute the exposure using netting wherever applicable. The Bank has computed the Capital Charge on Credit Risk

for Market Related Off-Balance Instruments and CVA after considering exposures on netted basis in line with Bilateral Netting guidelines in place as per Basel III Capital Regulations dated May 2013.

### Quantitative Disclosures

The Derivative exposures based on Current Exposure Methods (CEM) with out considering the netting benefit as per RBI guidelines on “Bilateral Netting of Qualified Financial Contracts is given below :

**Derivatives exposure as of 30<sup>th</sup> September 2024 basis Current Exposure Method (CEM) without considering the Netting Benefit:**

Particulars	Amount (₹ In Millions)			
	Foreign Exchange Contract	Interest Rate Derivative Contract	Cross Currency Swaps	Currency Options
Gross positive fair value of Contracts	2,507.98	739.50	1,812.67	120.64
Netting benefits	-	-	-	-
Netted current credit exposure	2,507.98	739.50	1,812.67	120.64
Collateral held	-	-	-	-
<b>Net Derivatives Credit Exposure</b>	<b>17,524.47</b>	<b>2,152.46</b>	<b>22,321.35</b>	<b>488.82</b>

The Bank received the collateral at counterparty-wise and not product wise, so the amount is not reported in above table. As of September 30, 2024, the value of collateral benefit Considered is ₹3,198.88 million (previous corresponding figure ₹3,715.01 million) for purpose of computation of counterparty risk.
