

Net Stable Funding Ratio – June 2024

Qualitative disclosure around NSFR

The Net Stable Funding Ratio (NSFR) and Liquidity Coverage Ratio (LCR) are significant components of the Basel III reforms. The LCR guidelines which promote short term resilience of a Bank's liquidity profile, Net Stable Funding Ratio (NSFR) is a global minimum standard aimed at ensuring reduction in funding risk over a longer time horizon by requiring banks to fund their activities with sufficiently stable sources of funding in order to mitigate the risk of future funding stress. It is a ratio of Bank's **Available Stable Funding (ASF)** to the **Required Stable Funding (RSF)**.

"Available stable funding" (ASF) is defined as the portion of capital and liabilities expected to be reliable over the time horizon considered by the NSFR, which extends to one year. The amount of stable funding required ("Required stable funding") (RSF) of a specific institution is a function of the liquidity characteristics and residual maturities of the various assets held by that institution as well as those of its off-balance sheet (OBS) exposures.

The Bank computes NSFR in accordance with RBI guidelines. The Bank believes that all balance sheet and off balance sheet items which might have a material impact have been considered for the purpose of NSFR.

The NSFR is calculated by dividing a Bank's ASF by its RSF for the entire balance sheet items based on the different factors as per the residual maturity. The guidelines for NSFR were effective October 1, 2021, with the minimum requirement at 100%. The Bank's NSFR as of the quarter ended June 30, 2024 stood at **120.30%**.
